

BAD BOT PROTECTION FOR A HEALTHIER BUSINESS

Complete defense against automated bot attacks and online fraud for web and mobile applications.

Pervasive bad bots and other automated scanners account for nearly half of website traffic—impacting almost every business. Today’s bots employ artificial intelligence and a variety of automated tools to masquerade as humans and break into customer accounts, steal critical content, and complete other forms of fraud.

Businesses need the ability to instantaneously distinguish between legitimate users and bad bots, with zero false positives. BotRx reveals attackers and where they are active, so businesses can stop fraud before it harms their business and customers.

Only BotRx provides comprehensive monitoring and protection for a complete defense that is operational on day one of deployment without requiring months to fingerprint bad/good traffic. Now it’s easy to get ahead of risk by automatically protecting critical network layers, so you can concentrate on growing your online business.

“BotRx’s solution is very advanced and protects applications and websites at the same time, securing user profiles, users’ stored value, individual funds, and cash flow.”

- Kenny Chen, FETC CIO

BENEFITS

- FAST & EASY DEPLOYMENT**
 - Minimal Integration
 - On Premise or Cloud
 - SaaS Model or Perpetual

- DETECT & MANAGE THREATS IN HOURS**
 - No Fingerprinting & Monitoring Period Required
 - Custom Configuration Per URL

- INTELLIGENT ASSESSMENT**
 - Zero False Positives
 - AI & ML Powered Threat Engine With Data from 10,000+ Global Businesses
 - Dynamic Validation

- ENTERPRISE GRADE DEFENSE**
 - Zero Day Protection
 - Proactive Blocking
 - Adaptive Honeypot
 - Moving Target Defense (MTD)

- ACTIONABLE DATA**
 - Detailed Alerts & Reports
 - Export Data to SIEM Tools

BotRx SECURES

OVER **\$146 BN** IN ONLINE TRADING

9 BN TRANSACTION REQUESTS

3 BN MALICIOUS ATTACKS

2.5 BN SCRAPING REQUESTS

3 BN FRAUD TRANSACTIONS

BotRx DeTx

FREE, LIFETIME ACCESS TO BOT MONITORING, TRACKING & REPORTING

BotRx DeTx continuously monitors network data and traffic patterns to detect and identify bad bots—allowing businesses to see where and when attackers are accessing their site.

UNMASK BOT ATTACKS WITH ONE LINE OF CODE

- Always free detection and identification of bots. Fully protect with ProTx when ready.
- Artificial Intelligence and Machine Learning outsmart bots and provide visibility into hidden threats.
- Lightweight security that doesn't affect business-critical traffic.

BotRx ProTx

FULL-STRENGTH BOT DETECTION & MITIGATION

BotRx ProTx provides total defense against automated attacks and fraud. BotRx's patented Dynamic Transformation Technology, behavioral analytics and built-in WAF provides complete web and mobile application protection to businesses of all sizes.

PROTECTION AS DYNAMIC AS THE ATTACKER

- Protects within hours of deployment, not months.
- Protects from all types of website abuse and associated fraud.
- Reduces the attack surface with randomized responses, transaction encryption and enforced application logic.
- Confuses attackers and reduces feedback to bad actors using variable response and adaptive honeypots.
- Visualize data through BotRx's interactive dashboard or export data to SIEM tools.

BOT MITIGATION

✓ Web Application Firewall

✓ Unknown Vulnerability Protection

✓ Business Login Attack Protection

✓ Traffic Monitoring

✓ Backdoor Protection

✓ TLS/SSL Support
